As you know, conditions are very unsettled and we believe that it will pay every family to try and raise a good garden this season, as well as other crops, as you will find it a great help in keeping down your expense account.

All prices are subject to market changes, as at this time it is impossible to arrange any price that may be good for any length of time.

We thank you for many past favors and trust to receive your valued orders the coming year. Yours very truly,

We usually have in stock other varieties and would be glad to furnish any variety wanted if possible to obtain at the time.

Grey Winter Oats. This is a leading variety and can be sown during the fall, winter and early spring. It yields very heavy and is a very valuable variety both for grain and hay. The favorite oat of this vicinity. **100 lbs. \$3.**

Cheat Seed. This is used as a hay crop and especially on wet land. Makes a fine hay if handled right. **100 lbs. market price.**

Buckwheat (Japanese). Is earlier than the other varieties. Is excellent for bee pasture. **Lb. 10c; 100 lbs. \$9.**

Dwarf Essex Rape. This great forage crop is becoming more popular every year. Yields an immense amount of green feed. **Lb. 15c. 100 lbs. \$11.50.**

Thousand Headed Kale. One of the most valuable forage crops for this valley ever introduced. It produces a mass of thick, curly green leaves, rich and succulent, which are eagerly eaten by sheep, cattle, horses, poultry and hogs. Especially recommended for green feed during the dry summer and also during the cold weather of winter, as it is good at all times. Makes the most rapid growth if sown in the spring, but can be sown in summer and fall for winter feed. **Pkt. 5c; oz. 10c; lb. 65c; by mail postpaid 75c.**

SUDAN GRASS

Sudan Grass is strictly an annual and dies each year like Millet and must be seeded again each spring. This makes it fit admirably into any system of rotation and while it does not benefit the soil like legumes it does afford a change in crop and this is a good thing for the soil.

Summing it all up, Sudan Grass is a hay green feed crop which seems to be especially adapted to the drier regions of the middle western states. **Price, per lb. 25c; postpaid, 35c; 100 lbs. market price.**

Milo Maize. The merit of this non-saccharine sorghum is that when cut for feeding it starts again from the remaining stumps with renewed vigor. Relished by all stock. **Lb. 15c, postpaid 25c; 100 lbs \$9.**

Feterita. A variety of corn, resembling Kaffir corn but is claimed to be more productive. **Lb. 15c, postpaid, 25c; 100 lbs. \$10.**

Broom Corn or Hog Millet. A large variety of millet that yields a heavy crop of hay or seed. **Lb. 15c, postpaid, 25c; 100 lbs. \$11.**

FIELD PEAS

Field Peas are very profitable crop and are grown here very extensively. They can be grown alone or with oats. When planted with grain and cut green they make a large amount of very rich feed; also valuable for enriching the soil if plowed under. The dry peas make excellent hog feed and are quite fattening. Sow, if alone, 120 pounds to the acre; if with other grain, 60 pounds.

FISHER'S FEEDS FOR POULTRY

"is Guaranteed Analysis"

A trial will convince you of their superiority over the much advertised "local brands."

Three years ago we took up the sale of the Fisher's Flouring Mills Co. line of Poultry Foods, because we decided that the Fisher's Foods were the best that money and experience could produce. Our sales are still increasing and thousands of our customers now agree with us that Fisher's Poultry Foods are unequalled in quality and always the same. Prices change but the formula never and you can always depend on getting full value. We claim they are the cheapest because the most profitable. We are in a position to quote the lowest prices.

Fisher's Chick Feed Feed this as a first feed to the baby chicks, but not until they are at least 48 hours old, figuring from time they are taken out of incubator.

Feed several times a day just a little at a time at first on a board or in feed hoppers. After two days scatter it in the straw litter and make them work for it. Chick feed should be fed for at least two months.

After four or five days start feeding our Chick Starting Mash in addition to the Chick Feed giving just a little three times daily, increasing gradually. (See instructions under Starting Mash. Don't forget "Choline" for chicks—it pays big.)

10 lbs., 50c; 100 lb. sacks, \$4.25.

Fisher's Chick Starter Milk Mash. Start feeding this when chicks are four or five days old in addition to our Chick Feed. Give just a little at a time, three

feeds daily, gradually increasing the amount to what they eat up clean in 10 to 15 minutes until they are 10 days old, when it can be left in the hopper before them for an hour or two for a few days, then leave it before them all the time until they are three to four weeks old—but feed Chick Food three times daily in addition in litter, as much as they clean up in 30 minutes. (Special feeding instructions on request.) 10 lbs. 50c; 100 lb. sacks \$4.25. Write for quantity price.

Fisher's Developing Mash. When chicks are four weeks old put them on Developing Mash, feeding in hoppers, having it before them continually in addition to regular grain feeds. This is a great feed to build the chicks up making healthy, strong pullets and will develop them so they can be ready to start the year's work in a vigorous condition. Feed until ready to put them on egg mash rations which should be changed gradually by mixing the two together, slowly increasing the Egg Producer Mash so they are on it complete at about six months of age. 10 lbs. 50c; 100 lb. sacks, \$4.25.

(See Mash Hoppers, Feeders and Founts, "Choline" helps them digest the food.)

Fisher's Growing Feed. This meets the wants of the growing chicks from the time they are eight to ten weeks of age until ready for scratch food. It contains the nutritive elements necessary for the rapid building of tissue and if fed Developing Mash will bring about the quickest possible development. 10 lbs. 50c; 100 lb. sack, \$4.25.

Fisher's Fattening Mash. Prepared expressly to meet the wants of the fancier who lacks weight in his show birds or the grower desiring to quickly fatten and finish young or old stock for the market. It will quickly add weight to a mature or growing fowl. 10 lbs. 50c; 100 lb. sack, \$4.

Fisher's Scratch Feed. It is composed of such an attractive variety of wholesome grains as will induce the fowls to scratch and work for it when thrown in the litter; otherwise it would defeat the purpose to feed nothing but whole grains. When fed with Fisher's Egg Producer of Buttermilk Mash, it makes an ideal balanced ration supplying the necessary materials for yolks and whites of the egg. Experienced Poultrymen recognize it as the best scratch food the market supplies. 10 lbs. 50c; 100 lb. sack \$3.75.

Fisher's Egg Producer. A mash mixture containing all the ingredients necessary to the matured laying hen; very rich in protein. It renders unnecessary the feeding of blood meal, beef scraps, etc. The rapidly increasing demand for Fisher's Egg Producer proves its real money-making value. Results will prove this the most economical mash on the market. 10 lbs. 50c; 100 lb. sack, \$3.75.

Fisher's Buttermilk Mash. A mash mixture containing the right elements in proper proportions for egg making and body maintenance. It provides the life and vigor promoting fat, keeps the layers in prime condition throughout the year, is strong in egg-making materials, appetizing, easily digested.

Balanced with Fisher's Scratch it completes a balanced body maintaining and egg making nourishment. It keeps the layers up to maximum capacity the year round. Protein, not less than 22%; Fat, not less than 6%; Fibre, not more than 4%. 10 lbs. 50c; 100 lbs. \$4.

Fish Meal. The grade we sell is the best obtainable, it contains nothing but pure fresh fish properly processed and will not taint the eggs. 10 lbs. 80c; 100 lbs. \$7.

Our "Special" Beef Scraps are rich in materials which make bone, muscle and lean meat. They insure health, thrift and vigor, and satisfy the natural craving of the bird's system for flesh-food in some form. Rich in protein. Can be fed dry or with cooked rations. Don't waste any feed in one section of Sanitary Feeder. See page 26. Lb. 10c; 10 lbs 80c; 100 lbs. \$7.

You do not want to use anything but the best, as it is money thrown away to use poor spray material. Spare the Spray and Spoil the Fruit. Never before has it been so necessary to protect fruit and vegetable crops against the ravages of insects and fungous diseases. This applies to commercial plantations and to the small orchard or garden. The question as to whether spraying pays has been answered. The real problem is one of improving sprays and their method of application. Government and State experiment stations are contributing greatly to this development work. In addition to them The Sherwin-Williams Company is sparing no expense to give the growers of fruits and vegetables, insecticides and fungicides of the highest quality and efficiency.

The leading insecticide and fungicides of today are in dry form, while paste and liquid forms are being discarded rapidly. These sprays are no longer home-made, but manufactured in a large commercial way, thus ensuring products of such uniform composition as to meet the requirements of both State and Government regulations. We are agents for this part of the valley for The Sherwin-Williams Co. and can certainly recommend them as we do not think there is any better spray material made. Send for The Sprayer's Manual, it is free.
